

INTELLIGENCE ON DEMAND

TRUSTWAVE SPIDERLABS SERVICES

Trustwave's elite security team, SpiderLabs, stays a step ahead of today's threats to help you make informed decisions about protecting your systems from malicious hackers. With vast insight into the latest vulnerabilities, attack vectors, exploits, malware and security breaches gathered from our security research, penetration testing and incident response engagements, we understand how attackers think and operate. We apply our deep, specialized knowledge to every customer engagement and implant that intelligence in every one of our security products and services.

OUR SERVICES

Keeping up with and addressing the latest threats presents a challenge to even the most mature and security-savvy organizations. No matter your size, Trustwave penetration testing, incident response, computer forensic investigation and threat intelligence services help you make smart, cost-effective security decisions.

Regardless of the maturity of your data security initiatives and tolerance for risk, we've seen it all – from small, local businesses to global enterprises – and offer a range of services to meet you at your level of need.

MANAGED SECURITY TESTING

Offensive and on-demand penetration testing for networks and applications

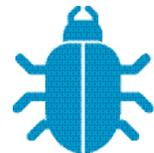

- Flexible Testing Options
- Scope and Schedule On Demand
- Cloud-based Management

INCIDENT READINESS & RESPONSE

Services designed to prevent compromise and protect integrity of business and data

- Incident Response Services
- Forensic Investigations
- Training
- Simulated Attacks

THREAT INTELLIGENCE & RESEARCH

Research, analysis and intelligence -delivered as a service - to detect and prevent security breaches

- Threat Research
- Advisory Feeds
- Global Threat Database

BENEFITS

By applying our proprietary research and insight from thousands of incident response investigations, penetration tests and other security research, Trustwave provides security insight and threat intelligence that you can't get anywhere else.

Trustwave SpiderLabs can help you to:

Protect against the unknown

By conducting a simulated attack against your mobile or Web applications, wired or wireless networks and office facilities, we will uncover previously unknown weaknesses so that you can eliminate vulnerabilities before an attacker can exploit them.

Transcend point-in-time security

Attackers are clever, and persistent, and continuously explore new vectors and techniques. Our subscription-based testing helps you easily integrate security into your everyday business practices and maintain protection against the latest threats.

Recognize and respond to what matters

Our incident readiness programs will prepare your staff to proactively identify the indications of a breach and contain it quickly and efficiently. Our expert forensic investigators are only a phone call away and can respond on demand to a data security compromise.

Augment your team

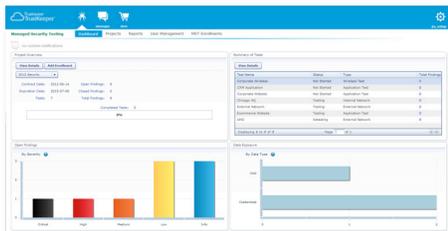

By working with us, you have unparalleled security expertise working for you, without the cost of building your own internal team. Your staff can focus on what matters most – the business – while Trustwave handles the security.

HOW WE WORK

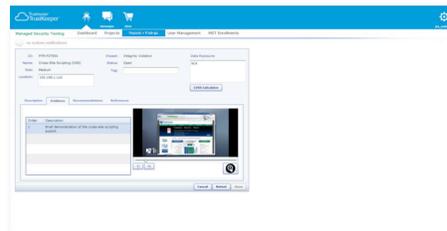

Some people refer to us as “ethical hackers” because we use our hacking skills for good. But make no mistake, we know the enemy and think just like them.

Our passion is investigating and unearthing exactly how your adversaries think and act. Our goal is to always keep you one step ahead. Our team of more than 100 people consists of penetration testers, incident responders, forensic investigators, malware engineers, security researchers, published authors and sought-after speakers. We span more than 10 countries and have an average of 12 years of experience.

- **Top talent**—We recruit and hire expert members of the information security community that make pivotal contributions to the data security community whether that's through research, tools or open-source projects.
- **Industry-leading research**—We study attackers and their techniques and discover vulnerabilities in the latest software and technology to feed this research into Trustwave's portfolio, as well as, present our findings at industry events such as Black Hat, DEF CON and through other channels.
- **Standardized methodologies**—Our methodologies and centralized QA processes ensure that you receive unsurpassed quality and consistent results and reports, every time.
- **Innovative technology**—From our award-winning TrustKeeper cloud platform that enables you to manage all services and technologies through a single portal, to MST, the first subscription-based, cloud-delivered penetration testing service in the market, to our Global Threat Database which feeds the latest threat intelligence into our products and services, we help to drive faster detection and improved management of vulnerabilities and threats.

Save yourself the staff-hours and frustrations of managing typical penetration testing projects by scheduling, managing and tracking all of your testing projects from a centralized dashboard in our award-winning TrustKeeper® portal.

Illustrate the impact of a vulnerability to management with video evidence of an exploit to corroborate your requests for budget to mitigate the risks to your organization.
